Features / Bug Fixed

- Improved marble-wall collision accuracy using precise circle-to-rectangle collision detection based on the closest point on the wall.
- Added a proper game-over screen for both successful completion and timer expiry, including the finish time on win.
- Added replay support with Easy, Medium, and Hard difficulty levels that change tilt strength, friction, speed, and time limit.
- Added sound feedback for wall bounce, reaching the goal, and timer timeout.
- Kept the countdown timer visible during gameplay and preserved the existing Pygame/OOP project structure.

Submission Note

The repository contains the completed AFTER implementation. The linked BEFORE video demonstrates the original project behavior, the AFTER video demonstrates the completed features, and the ChatGPT link provides the required LLM interaction history.

Before submitting, make sure the two Google Drive files are shared as "Anyone with the link - Viewer" so the evaluator can open them.
